

YOUSSEF GAMAL

Junior Penetration Tester — Web, API, Android & Active Directory Security

Cairo, Egypt — +20 1091759746 — yg9552753@gmail.com
[in](#) LinkedIn • [globe](#) Portfolio • [github](#) GitHub • [flag](#) HTB (Level 40)

PROFESSIONAL SUMMARY

Junior Penetration Tester focused on Web, API, Android, and Active Directory security. Hands-on experience identifying and exploiting vulnerabilities through Hack The Box machines, PortSwigger labs, and personal security research projects. Experienced in vulnerability assessment, privilege escalation, attack path analysis, and writing detailed penetration testing reports with remediation recommendations.

TECHNICAL SKILLS

- **Web & API Security:** OWASP Top 10, Authentication Flaws, IDOR/BOLA, SQL Injection, XSS, SSRF, SSTI, File Upload Vulnerabilities, JWT Security, GraphQL Testing, Burp Suite.
- **Active Directory Security:** Domain Enumeration, BloodHound, Kerberos Attacks, Kerberoasting, AS-REP Roasting, Pass-the-Hash, DCSync, NTLM Relay, AD Certificate Services (AD CS) Fundamentals.
- **Mobile Security (Android):** APK Static Analysis, JADX, APKTool, ADB, Frida Instrumentation, SSL Pinning Bypass, Runtime Analysis, Burp Suite Integration.
- **Infrastructure Security:** Linux & Windows Privilege Escalation, Network Enumeration, SMB/LDAP/Kerberos Analysis, Nmap, Impacket, Metasploit.
- **Programming & Tools:** Python, Bash, PHP, Git, Docker, Kali Linux, Custom Security Automation Scripts.

PROJECTS & SECURITY PORTFOLIO

Active Directory Penetration Testing Portfolio

Personal Research

- Performed enterprise-style Active Directory attacks in controlled environments covering enumeration, credential attacks, privilege escalation, and lateral movement.
- Practiced attack techniques including Kerberoasting, AS-REP Roasting, Pass-the-Hash, DCSync, and certificate-based attacks.
- Created detailed technical writeups documenting attack paths, exploitation steps, and remediation recommendations.
- [View Active Directory Writeups](#)

Web Application Security Research Portfolio

Personal Research

- Documented multiple Hack The Box and PortSwigger labs covering SQLi, SSRF, SSTI, authentication bypass, and business logic flaws.
- Developed methodology documentation covering reconnaissance, exploitation, validation, and reporting phases.
- [View Web Application Writeups](#)

Android Application Security Research

Independent Research

- Performed static and dynamic analysis of Android applications using JADX, ADB, Frida, and Burp Suite.
- Practiced runtime manipulation and SSL pinning bypass techniques using Frida instrumentation.

RESTful API Development & Security Assessment

Laravel / PHP

- Developed and secured REST APIs with a focus on authentication, authorization, and secure application design.
- Assessed API endpoints for broken access control, input validation issues, and business logic vulnerabilities.
- [View Quality Management API](#)

SECURITY RESEARCH EXPERIENCE

- Authored 15+ comprehensive penetration testing reports for Hack The Box machines, documenting the entire exploitation lifecycle from initial reconnaissance to full privilege escalation aligned with remediation techniques.
- Designed and simulated virtual Active Directory environments to understand core domain services, followed by executing advanced enterprise-level attacks within complex Hack The Box lab networks (covering enumeration, credential hunting, and lateral movement).
- Completed hands-on penetration testing exercises through Hack The Box, PortSwigger Web Security Academy, and CyberTalents.
- Solved and documented multiple vulnerable environments involving Web exploitation, Linux privilege escalation, Windows attacks, and Active Directory compromise scenarios.
- Created professional penetration testing reports containing vulnerability descriptions, exploitation methodology, impact analysis, and remediation guidance.

EDUCATION

Faculty of Computers and Artificial Intelligence, Benha University

B.Sc. in Computer Science

Benha, Egypt

Graduated 2024

CERTIFICATIONS, COURSES & LANGUAGES

- **Training:** Hack The Box Academy - Penetration Tester Path — PortSwigger Web Security Academy — Android Application Hacking Black Belt Edition.
- **Currently Preparing:** Hack The Box Certified Penetration Testing Specialist (CPTS).
- **Languages:** Arabic (Native) — English (Professional Working Proficiency).
